An introduction to Cevo

RMIT Capstone Students – August 2026

Build an organisation that never stops evolving

Cevo turns transformation from a one-off program into a lasting capability to adapt, innovate and deliver better outcomes. We design and deliver modern cloud platforms, unlock data for insight, and apply AI where it creates real value.

And we don’t just deliver – we empower your team so the value compounds long after the project ends.

Transformation isn’t a finish line, it’s a capability. And we help you build it.

The continuous evolution lifecycle

Make modern cloud, integration, data and AI a habit, not a project.

Move faster, with confidence

About us

Cevo helps organisations build the capability for continuous evolution by designing modern cloud platforms, unlocking data for insight, applying AI where it creates real value, and empowering teams to continually adapt, innovate and deliver better outcomes.

2016
founded

190+
certifications

50+
consultants

12
AWS competencies & programs

4
offices

- Melbourne
- Sydney
- Canberra
- Brisbane

Awards

AWS Financial Services Partner of the Year APJ Finalist 2025

2023 Winner - Modernising Infrastructure

AWS Social Impact Partner of the Year APJ 2022

Our AWS Competencies

4
AWS competencies

- Migration Consulting Competency
- DevOps Consulting Competency
- Resilience Services Competency
- Financial Services Competency

4
AWS partner programs

- Public Sector Partner
- Well-Architected Partner Program
- Immersion Day
- AWS Lambda Delivery

3
AWS service validations

- AWS Lambda Delivery
- Amazon EC2 for Windows Server Delivery
- AWS Control Tower Delivery

Industry Specialisations

- Financial services
- Retail
- Energy & Utilities
- Media & Entertainment
- ISV
- Government
- Healthcare
- Education

ISV Partnerships

Our *AI Everywhere* approach

At Cevo, AI isn't a separate workstream, it's built into how we deliver. We use AI to accelerate discovery, engineering and operations, so teams ship faster, make better decisions and spend more time on real customer value.

Evolve faster

- **Code & infrastructure development** — AI assists with writing, scaffolding and testing to speed delivery and improve quality.
- **Discovery & analysis** — AI surfaces insights quickly, helping teams form baselines and data-driven recommendations.
- **Testing, debugging & log analysis** — AI detects patterns, generates tests and explains errors to accelerate troubleshooting.

Evolve smarter

- **Code review & quality assurance** — Automated reviews for security, performance and best practices improve consistency.
- **Solution & architecture design** — AI generates diagrams and schemas to support rapid, collaborative design.
- **Documentation & knowledge capture** — AI produces and maintains design, code and API documentation for transparency.

Evolve continuously

- **Learning & upskilling** — AI generates contextual learning and training content to help teams master new tech faster.
- **Productivity & workflow automation** — AI automates repetitive tasks and summaries so engineers can focus on innovation.

End-to-end capabilities for continuous evolution

Design and scale AI that delivers measurable business value

We design and deliver practical AI and agentic systems that automate work, support decisions and create measurable value, built safely, responsibly and ready to scale.

Turn data into insights people actually use

We help organisations collect, model and govern their data, and turn it into dashboards, analytics and insights that teams trust, use daily and build smarter decisions on.

Modernise how your digital systems work, and how they're built

We evolve legacy applications and features, and build new ones using modern architecture, product thinking and AI-enabled delivery to reduce friction, increase speed and unlock innovation.

Move your workloads to the cloud and keep improving once they're there

We use AI to rapidly assess environments, map dependencies and shape the right path forward, then help organisations transition systems into the cloud and continuously improve security, cost and performance.

The Cevo difference

Built for continuous evolution

We work alongside you to build the capability to keep evolving. Every engagement strengthens your platforms, people and ways of working, so you can adapt faster and stay ready for what's next.

Strategic architects, not just engineers

We think like architects, connecting technical decisions to your business goals and long-term outcomes. Our teams listen deeply, challenge thoughtfully and design with intent.

All in on AWS

As an Australian-owned AWS Premier Partner, we bring deep AWS expertise from cloud foundations through to AI. Our focus is secure, scalable solutions that keep pace with change.

AI-enabled by design

AI is embedded into how we work, from discovery through to delivery. We use it to accelerate learning, reduce friction and turn ideas into real progress.

Proven methods, real outcomes

Our delivery is shaped by experience across hundreds of AWS engagements. Lean, senior teams apply shared patterns, design reviews and collaboration to drive faster progress and real results.

Local teams, lasting partnerships

Our onshore teams work side-by-side with yours, bringing local insight and clear communication. We embed capability as we go, leaving you stronger and less dependent over time.

Better together

As an AWS Premier Tier Partner, we bring deep technical expertise and AWS best practices to deliver secure, reliable cloud solutions. Together, we're committed to putting our customers first and achieving exceptional outcomes at every step.

Cevo is a business built on AWS. We leverage this strong partnership to deliver transformative solutions that drive success for our shared customers.

Our AWS Partnership

Our customers

We go on a journey with our customers, partnering with them to achieve success through their transformations and beyond.

Building the Future of Healthcare Data & AI

RMIT × Databricks × AWS × Cevo

THE CHALLENGE **Healthcare and research organisations struggle to turn fragmented clinical data into actionable insights.**

WHAT YOU'LL EXPLORE

01 **Modern Clinical Data Repositories**

02 **Healthcare Data Standards (FHIR)**

03 **Secure Data Governance**

04 **AI-Powered Analytics**

05 **Responsible AI in Healthcare**

Aligned to health data platforms, clinical data repositories, research analytics and AI-enabled healthcare innovation.

WHY IT MATTERS

Your work could shape a repeatable industry accelerator for:

- **Universities**
- **Medical Research Institutes**
- **Healthcare Providers**
- **Government Health Agencies**

Better leverage data, analytics and AI to improve outcomes.
